

Digital Marketing Project 3

Content Writing & Optimization | Prepared by Tanya Chauhan

This updated project has been redesigned according to the Project 1 and Project 2 UI and layout standards. It includes a responsive website, dashboard-style metrics, filterable keyword table, content analyzer, workflow images, SEO-optimized content assets, and complete documentation.

Project Objective

Write and optimize content for digital platforms using keyword research, natural keyword placement, proper heading hierarchy, metadata, readability, and on-page SEO fundamentals.

UI and Layout Consistency

The website uses the same navy/orange color palette, sticky navigation, hero dashboard, cards, tables, workflow timeline, and interactive features used in the Project 1 and Project 2 portfolio.

Core Theory

Content optimization means structuring written content so that users can read it easily and search engines can understand the topic clearly. This is achieved through H1/H2/H3 hierarchy, keyword placement, metadata, URL slugs, image alt text, and concise formatting.

Information Gain

High-value content should not repeat common information only. It should add a unique angle, practical insight, examples, or checklists that reduce user uncertainty.

Keyword Placement

Primary keywords should appear in the meta title, URL slug, H1, introduction, one H2, image alt text, and conclusion. Supporting LSI keywords should be used naturally in body content.

Readability Rules

Use short paragraphs, bullet points, bold text, headings, white space, and clear CTAs. This reduces cognitive load and improves engagement.

Website Features

- Responsive landing page
- Dark/light theme toggle
- Interactive article tabs
- Filterable keyword database
- Content optimization analyzer
- Search result preview
- Dashboard metrics
- Workflow diagrams

- Offline working JSON data
- Beginner-friendly code comments

Sample Keyword Research Table

Keyword	Intent	Cluster	Volume	Allintitle	KGR	Priority
content writing and optimization	Informational	Content Writing	2219	410	0.19	High
content writing and optimization guide	Informational	Content Writing	2238	574	0.26	Medium
content writing and optimization template	Informational	Content Writing	2257	672	0.31	Medium

- H2: Where H3 Adds Detail
- H2: Common Mistakes
- H2: Final Checklist

Workflow Diagrams

IPO CONTENT MODEL

Input -> Process -> Output for content optimization

Matched UI: navy/orange palette, card layout, dashboard metrics, filterable tables, and interactive analy

ON-PAGE CONTENT OPTIMIZATION CHECKLIST

One clear H1

Use the main keyword once in the main heading.

Logical H2/H3 hierarchy

Break content into scannable sections.

Keyword density 1-2%

Use keywords naturally; avoid stuffing.

Meta title & description

Write search-friendly snippets that earn clicks.

URL slug & alt text

Use readable slugs and descriptive image alt text.

Internal links & CTA

Guide users to next action and related content.

Conclusion

This Project 3 package is suitable for internship submission, academic evaluation, GitHub hosting, and resume portfolio use. It maintains visual and functional consistency with Project 1 and Project 2 while focusing specifically on content writing and on-page SEO optimization.
