

Digital Marketing Project 2

SEO Basics & Keyword Research

Prepared by: Tanya Chauhan | DecodeLabs Industrial Training Kit | Batch 2026

SEO Keyword Research Execution Workflow

Project 2 | Prepared for Tanya Chauhan | DecodeLabs Digital Marketing Internship

Output: verified keyword table, intent map, and page recommendations before paid ads.

1. Project Objective

The objective of this project is to perform basic keyword research for a website or blog. The work includes finding relevant keywords, identifying search intent, and suggesting keywords for content. This aligns with Project 2 requirements: SEO fundamentals and keyword research.

2. Brand / Website Selected

The selected brand concept is SkillForge by DecodeLabs, an internship and project-based learning platform for students. The target audience includes B.Tech students, beginner coders, digital marketing learners, and career-focused students searching for practical internships.

3. SEO Theory in Simple Language

SEO means making a webpage easier for search engines and users to understand. A good SEO plan does not start with random content. It starts with the user query, checks the search intent, validates demand, and then creates a page that answers the query better than existing results.

4. How to Express SEO Thoughts

A professional SEO explanation should connect evidence with decision-making. The structure is: user problem, keyword phrase, search intent, content recommendation, and expected outcome. Example: “This keyword should be targeted because it has transactional intent, low KGR, and can be answered with a focused application landing page.”

5. Search Intent Analysis

Search intent explains why a user searches. Informational intent means the user wants to learn. Navigational intent means the user wants a specific page. Commercial intent means the user compares options. Transactional intent means the user is ready to act.

6. Long-Tail Keyword Strategy

Long-tail keywords are specific phrases. They usually have lower competition and higher conversion probability than broad keywords. Instead of targeting only “internship,” this project targets phrases like “remote data science internship 2026.”

7. KGR Formula

KGR means Keyword Golden Ratio. Formula: $KGR = \text{allintitle results} / \text{monthly search volume}$. A KGR below 0.25 is considered a strong low-competition opportunity for new content.

8. Execution Workflow

The workflow is: brainstorm seed keywords, expand with autocomplete and variations, validate volume and SERP competition, calculate KGR, then categorize by search intent and map each keyword to a content type.

9. Keyword Research Table

Keyword	Volume	Allintitle	KGR	Intent	Suggested Content
remote data science internship 2026	320	45	0.14	Transactional	Internship landing page
python internship for btech students	590	120	0.20	Commercial	Comparison blog + CTA
best digital marketing internship 2026	480	110	0.23	Commercial	Program landing page
seo basics for beginners internship	170	28	0.16	Informational	Educational blog
keyword research project example	210	35	0.17	Informational	Portfolio article
full stack internship with projects	390	85	0.22	Commercial	Service page
ai ml internship for beginners	720	160	0.22	Commercial	Cluster landing page
how to do keyword research for a website	880	190	0.22	Informational	How-to guide
decodelabs internship login	90	8	0.09	Navigational	Support page

apply for seo internship online	260	50	0.19	Transactional	Application page
technical seo checklist for students	140	22	0.16	Informational	Checklist post
remote python sql internship	150	30	0.20	Transactional	Landing page

10. Meta Title and Meta Description Examples

Keyword	Meta Title	Meta Description
remote data science internship 2026	Remote Data Science Internship 2026 SkillForge	Apply for a remote data science internship built for B.Tech students. Learn Python, SQL, analytics and build portfolio projects.
python internship for btech students	Python Internship for B.Tech Students Career Roadmap	Compare Python internship paths, skills, projects and outcomes for B.Tech students planning a technical career.
best digital marketing internship 2026	Best Digital Marketing Internship 2026 SEO & Ads Track	Explore a practical digital marketing internship focused on SEO, keyword research, content planning and paid ads readiness.
seo basics for beginners internship	SEO Basics for Beginners Internship Learning Guide	Learn SEO basics in simple language: keywords, search intent, meta tags, SERP and keyword validation.
keyword research project example	Keyword Research Project Example Step-by-Step SEO Plan	See a complete keyword research example with intent mapping, KGR calculation and content suggestions.
full stack internship with projects	Full Stack Internship With Projects Build Real Apps	Join a project-based full stack internship covering React, Node.js, databases and deployable applications.

11. Content Recommendations

- Create one main internship landing page for each high-intent keyword cluster.
- Use informational blogs to answer beginner questions and internally link them to application pages.
- Place the primary keyword in the title tag, URL slug, H1 heading, first paragraph and meta description naturally.
- Use comparison content for commercial keywords and clear CTA sections for transactional keywords.
- Track outcome metrics such as organic impressions, ranking keywords, clicks, profile views and application leads.

12. Conclusion

This project demonstrates that SEO is a data-driven visibility strategy. By using long-tail keywords, search intent categories, KGR validation and content mapping, a brand can create pages that answer real user demand. The final strategy is ready for website implementation and internship submission.
